[Process for delamination of multilayer film](#)

A Spanish university has developed a procedure for the delamination of the multilayer film. It uses a mechanical method, rather than a chemical dissolution, to facilitate access to the area between layers of the laminates. As the reactant accesses the interlayer, it eliminates the adhesive that joins these films, thus producing their separation. Companies interested in the commercial exploitation of this technology through licence agreements and/or technical cooperation are sought.

[Technology for removing aromatic hydrocarbons, particularly creosote oils, from wooden products](#)

A Polish company from the waste management sector offers the technology for cleaning-up creosoted wood, railway sleepers in particular. So far, such hazardous waste has been left untreated or was burned because no efficient method of recycling them existed. The technology is an environment-friendly, cost-effective and time-saving alternative, which reduces the content of harmful substances to below 0,1%. Cooperation under either commercial agreement or license agreement is offered.

[French manufacturer of oceanographic instruments seeks trade intermediary services in Germany](#)

A French SME specialised in scientific and technical instrumentation has developed a range of autonomous and communication tools (data loggers, multiparameter probes, buoys, underwater drones) for measuring in real-time and monitoring various physical or chemical parameters in seawater and marine environment. The SME seeks sales representative in Germany under commercial agency agreement or distribution services agreement to represent their brand and sell the instruments dedicated to oceanology.

[Leading Greek IT company offers free access to global food safety platform to ensure safe food for all during challenging times](#)

A leading Greek IT company, working for food safety intelligence, offers for free a platform that minimizes the food safety risks in the supply chain. The platform supports the food industry to quickly respond to major health crises like the Covid-19. The company aims to support the food industry experts to navigate through supply chain challenges, as well as helping the production and distribution of safe food on a global basis. Food experts and producers are sought for licence agreement.

[A Belgian company that developed patented technologies to valorise low value side streams by means of microbial protein \(Single Cell Protein\) seeks partners interested in license agreements](#)

The Belgian company has developed innovative and patented technologies to valorise side streams. They are looking for partners interested in licensing agreements to commercialise these innovative processes abroad. Potential partners should be active in animal feed/human food/organic fertilizer/bioplastics sectors.
