[The production technology of “green” hydrogen from bio-glycerin \(a waste product of biodiesel production\) and from bioethanol](#)

Update: 2020-04-22 - Deadline: 2021-04-23

This Ukrainian R&D company has developed a technology for the production of “green” hydrogen from biodiesel production waste - bio glycerin, as well as from bioethanol. The company is looking for interested partners on the basis of a technical cooperation agreement to test the technology in an industrial environment.

[A wearable continuous learning environment](#)

Update: 2020-04-24 - Deadline: 2021-04-25

An innovative Italian company has developed a Ready2Use communication platform integrated with wearable devices to drive and manage any kind of field Work-Flow by enabling hands-free real-time collaboration among productive resources. Operators can benefit from both live support approach and a full set of tools for inspection checklists. The SME is interested in commercial agreements with technical assistance with partners or end users such as: manufacturing firms, service providers, utilities.

[Water treatment with very low-frequency electromagnetic resonance fields to remove limescale and biofilm from water pipes, protecting sanitary facilities and achieving biosecurity](#)

Update: 2020-04-23 - Deadline: 2021-04-24

A Swiss SME with expertise in water treatment has developed a game changing technology for removing of limescale and biofilms in sanitary water pipes in buildings, achieving key benefits for building owners and the wellbeing of occupants. The physical technology is using very low frequency electromagnetic resonance fields. Neither chemical nor biological products are used. The SME is seeking applied research partners interested to test the technology in the frame of a research cooperation.
