Oportunidades de cooperación tecnológica: Búsquedas de Socios

[Slovenian elderly care center is looking for a hospital to test IT application in clinical setup and to apply for AAL Call2021 – H2020 Societal Challenge](#)

Update: 2021-04-07 - Deadline: 2021-04-30

Slovenian privately owned center for comprehensive care of the elderly has been established in 1995. It's managing elderly care units in eight Slovenian towns. They will apply for the AAL call Active Assisted Living Programme Ageing Well in the Digital World Call2021 (H2020 Societal Challenge). They are looking for an additional partner, a hospital, (preferably long-term care hospital with already established nutritional screening) where the IT app would be tested.

[Slovenian elderly care center seeks IT company to develop a software application for nutritional screening and to apply for AAL Call2021 – H2020 Societal Challenge](#)

Update: 2021-04-05 - Deadline: 2021-04-30

A privately owned Slovenian center for comprehensive care of the elderly, established in 1995. manages elderly care units in eight Slovenian towns. They will apply as a lead partner to the ALL call Active Assisted Living Programme Ageing Well in the Digital World Call2021 (H2020 Societal Challenge). They are looking for an additional partner, an IT company that can develop a software application for nutritional screening.

Oportunidades de cooperación tecnológica: Demandas

[Lithuanian governmental organization is looking for a solution on how to manage fiscal data securely and reliably](#)

Update: 2021-03-24 - Deadline: 2021-05-24

Lithuanian governmental organization is planning to develop a virtual fiscal e-service. The organization is looking for an innovative solution for the decentralized transmission of fiscal data,

ensuring its irreplaceability, traceability and reliability. Potential cooperation types might be licence or technical cooperation agreement.

[Lithuanian governmental organization is seeking a solution on how to improve the environmental risk assessment of companies](#)

Update: 2021-03-24 - Deadline: 2022-03-25

Lithuanian governmental organization, who is working in the field of environmental protection, is looking for a innovative solution that could assess the level of environmental risk posed by companies. The assessment shall be based on the information that the organization collects. Possible cooperation types might be license or technical cooperation agreement.

[Lithuanian governmental organization is seeking a solution on how to detect illegal employment using online sources](#)

Update: 2021-03-24 - Deadline: 2022-03-25

Lithuanian governmental organization, who is working in the field of labor law enforcement, is looking for a innovative solution that would help reduce the cases of illegal work in Lithuania. The assessment of illegal undertakings shall be based on the information that the organization collects and that is available online. Possible cooperation types might be license or technical cooperation agreement.

[Lithuanian governmental organization is seeking a solution on how to automate the detection of illegal gambling operators online](#)

Update: 2021-03-24 - Deadline: 2022-03-25

Lithuanian governmental organization, who is working in the field of gambling law enforcement, is looking for a innovative technological solution for the control of illegal gambling operators. The assessment of illegal undertakings shall be based on the information that is available online and that the organization collects. Possible cooperation types might be license or technical cooperation agreement.

[Lithuanian governmental organization is seeking a solution on how to archive data from state information systems?](#)

Update: 2021-03-24 - Deadline: 2022-03-25

Lithuanian governmental organization, which participates in the shaping of national policy in the field of management and use of documents and archives, is looking for a way to gather the data of registers and state information systems to the state archives for the purposes of historical and other research, so that this information is preserved and accessible to future generations. Possible cooperation types might be license or technical cooperation agreement.

Oportunidades de cooperación tecnológica: Ofertas

[Belarusian university offers technical cooperation for research of parameters and fabrication of integrated digital magnetic threshold sensors](#)

Update: 2021-04-05 - Deadline: 2022-04-06

Belarusian university has developed a technology for fabrication of integrated digital magnetic threshold sensors which has special design of components, synthesized original sensitive material with special properties. The university is interested in technical cooperation with industrial partner in joint research, testing and fabrication of integrated digital magnetic threshold sensors controlled by an electric field.

[Italian inventors offer innovative technology to prevent disconnection due to electric power overload](#)

Update: 2021-03-23 - Deadline: 2022-03-24

Italian inventors have patented an innovative technology to prevent disconnection due to electric power overload. Unlike the state of the art, the device will be easy to install and usable by all types of users and doesn't require significant economic investments. Inventors seek technological partners to complete the development of the technology (concept state at the moment) and enter the market with the final product, under license, manufacturing and research cooperation agreements.

[Compact and tunable liquid crystal lens to control the propagation of light and transmit signal/data](#)

Update: 2021-03-31 - Deadline: 2022-04-01

A French SME, working on tunable liquid crystal lenses since 2009, has developed a technology based on a conductive transparent polymer which gives a very uniform and continuous fringe pattern. The patented electrode structure can generate tip/tilt along the optical axis. Possible applications range from autofocus for image sensors to beam shaping of light sources. Technology transfer is sought with an industrial partner under license agreement and/or technical cooperation agreement.

[Advanced LED lighting systems for the cross-linking of all UV-catalysed types and applications like photoactivation of bonding materials, paints adhesives as well as polymers](#)

Update: 2021-04-07 - Deadline: 2022-04-08

An innovative start-up born in 2016 has developed a system of LED lamps and software that is applied in different sectors through research, conducted with research centres and universities. Companies operating in the sectors of material bonding, tropicalisation of electronic boards, tracing, local sanitisation, photo-activations are sought for commercial agreements with technical assistance.

[The Russian company specialized in neural networks seeks for international partners for technological cooperation](#)

Update: 2021-04-08 - Deadline: 2022-04-09

A Russian company from Moscow specialised in a neural networks, offers solutions for accelerated learning and lower hardware cost. The company is looking for other developers for technical cooperation and end users for commercial agreements with technical assistance, in a wide variety of sectors including metallurgy, finance, transport, education.

[End-to-end solution for providing remote support with augmented reality in the field of industry 4.0](#)

Update: 2021-04-07 - Deadline: 2022-04-08

A Spanish company, specialising in software development based on new technologies (Augmented Reality, Internet of Things and Wearables), has developed a comprehensive solution that enables communication, sharing video and audio in real time and with multiple tools that, thanks to Augmented Reality (AR), facilitate the support and execution of activities remotely, without costs or travel, and generating evidence of the work carried out. The company is looking for license agreement.

[Database with food composition data on branded foods is offered for licensing](#)

Update: 2021-04-08 - Deadline: 2022-04-09

Slovenian public and private research organizations have developed a food composition database of food products available on the Slovenian and Eastern European market. The database is constantly updated and used in the national programme for food and physical activity for health to help end-users make informed decisions on consuming food products. The license to use the database is offered to partners in sports, fitness, nutrition organizers, food producers as well as research and academia.

[German provider of cutting-edge solutions for AI driven digitalization is looking for partners from the manufacturing industry using aluminium die casting to further develop the technology under a technical cooperation agreement](#)

Update: 2021-03-29 - Deadline: 2022-03-30

A German start-up specialised in artificial intelligence (AI) driven digitalization of manufacturing companies has developed a cutting-edge AI solution for visualization, monitoring, and predictive analytics in real-time. The company is looking for manufacturing companies which are using aluminium die casting as a process to jointly finalize the solution for a market entry. Partners for this technological cooperation agreement should be based especially in the DACH region.

[Machine learning engine to monitor human performance](#)

Update: 2021-04-08 - Deadline: 2022-04-09

An Italian SME has developed a machine learning (ML) engine, capable of processing inputs from multiple data sources: human behavior, speech, brain activity, physiological measures, data from equipment to anticipate operational risks by warning the operators, with respect to human performance. The SME is looking for marketing and commercial agreements with technical assistance, mainly in Europe and extra-UE. The SME is also open to research cooperation agreements.

[Air core fibre coupler for ultrafast lasers and power splitting](#)

Update: 2021-04-01 - Deadline: 2022-04-02

A Singapore institute of higher learning has developed a novel air core fibre coupler, that can be used in mid-infrared (IR) or ultraviolet (UV) regions where conventional solid fibre couplers cannot cover. An air core fibre component is ideal for building an all-fibre ultrafast mid-IR fibre laser cavity for ultrafast lasers and power splitting applications. The technology provider is interested in licensing or commercial partnerships with technical assistance with MNEs/SMEs of all sizes.

[AI platform for automated energy flexibility, cost management, and carbon reduction](#)

Update: 2021-04-12 - Deadline: 2022-04-13

The UK SME has developed a unique Artificial Intelligence (AI) driven platform for optimising energy capacity, reducing carbon footprint and harnessing energy flexibility within commercial premises. They are seeking commercial and technical cooperation with non-domestic energy users such as factories, offices, schools, retailers and hospitality etc. which are considering future energy strategies and reducing carbon footprint.

[UK electronics engineering company offers specialist low pressure moulding technology](#)

Update: 2021-04-01 - Deadline: 2022-04-02

UK company that specializes in the sealing and protection of electronics using low pressure injection moulding technology offers this technology to partners either under a licensing agreement or commercial agreement with technical assistance.

[Spanish innovative SME from the machine vision field sector with imaging solutions for harsh conditions applications is looking for partners regarding special applications and developments](#)

Update: 2021-04-02 - Deadline: 2022-04-03

The Spanish company counts with more than ten years' experience, with technologies related with photonics and imaging solutions for special and hazardous conditions. Counting with an R&D department and proprietary products, offers its development and design experience in combining different technologies for image capturing processes. They seek to establish collaborations with experts and/or industrial partners under commercial with technical assistance, technical or joint venture agreements.

[A portable device for accurate measurement of light reflections at an opaque surface offered for a licensing agreement](#)

Update: 2021-03-25 - Deadline: 2022-03-26

Researchers from the Czech university have developed and tested a miniaturised device for measuring the light reflections at an opaque surface based on bidirectional reflectance distribution function and the bidirectional texture function. Applications are in 3D graphics and games, virtual and augmented reality, industrial design, archaeology, geography, material testing and product marketing. The researchers are looking for manufacturing partners interested in a licensing agreement.

[Unmanned aerial vehicles for autonomous operations](#)

Update: 2021-03-26 - Deadline: 2022-03-27

A Singapore institute of higher learning has developed a fully autonomous and unmanned aerial vehicle solution for drone navigation in complex urban environments. Potential applications of the technology include site and building inspections, off-shore structure surveillance and more. The technology provider is interested in licensing or commercial partnerships with technical assistance with MNEs/SMEs of all sizes.

[Covid-19 salivary rapid and easy molecular test](#)

Update: 2021-03-30 - Deadline: 2022-03-31

A French company specialising in critical medical devices has developed a Covid-19 salivary rapid and easy molecular test in collaboration with a recognised research organisation. This saliva screening solution is CE-IVD (In-Vitro Diagnostic Devices Directive) marked and is for

professional use only. The company is looking for new international partners through licence agreements or commercial agreements with technical assistance.

[Serious games for the autonomous measurement of balance and its rehabilitation are offered for research or technical cooperation agreements.](#)

Update: 2021-04-12 - Deadline: 2022-04-13

A Spanish research team experienced in the field of serious games and its application for rehabilitation, has developed an interactive system for measuring one of the most used balance tests in clinics, and performing rehabilitation exercises using RGBD devices (colour and depth cameras). For its actual deployment at home, the team is looking for companies in the field of technology and healthcare or elderly care to make a prototype based on a research or a technical cooperation agreement.

[French company offers Domain Name System protection and Domain-based Message Authentication, Reporting and Conformance monitoring platform](#)

Update: 2021-03-29 - Deadline: 2022-03-30

French SME expert in cybersecurity offers technology to secure emails domains and protect companies against potential threats like business email compromise, fishing, spoofing and impersonation. This technology allows the user to drastically lower the risk of frauds. The company is seeking commercial agreements with technical assistance, license agreements or financial agreements.

[Characterization of transportation subsystems under extreme conditions](#)

Update: 2021-03-29 - Deadline: 2022-03-30

A French technology center, based in northern France, is specialized in ground transportation sector (automotive and railway). It is providing testing techniques and expertise for characterization of transportation subsystems used in extreme environment conditions. It is looking for partners from ground transportation sector to collaborate under technical cooperation agreement to provide tests.

[Evaluation of material and/or trial methods in transportation tests environment](#)

Update: 2021-03-30 - Deadline: 2022-03-31

A French SME, based in northern France, is specialized in tests and R&D projects in transportation environment. It is proposing to evaluate testing machines or trial methods in the specific area of ground transportation sector. It can ensure that the machine or the technique fulfill automotive manufacturers requirements. It is looking for partners willing to collaborate under technical cooperation agreement.

[New enterprise search solution](#)

Update: 2021-03-25 - Deadline: 2022-03-26

A German start-up offers an enterprise search engine. The unique combination of different technologies results in improved search features enabling new and leaner workflows. The solution is easy to use and requires only little administration. Partners are sought for commercial agreements with technical assistance, joint venture, technical cooperation or license agreement.

[Consultancy and development services offered in the area of distributed clock synchronisation for data acquisition purposes.](#)

Update: 2021-04-12 - Deadline: 2022-04-13

A Cypriot start-up specialising in data acquisition, signal processing, distributed clock synchronisation, underwater acoustics, and electronic hardware prototyping aspires to engage in Services cooperation agreements with interested parties. Consultancy and development services are offered for fulfilling real-time data acquisition requirements. Methodologies and hardware/software have been developed to provide streams of synchronised data from a large number of analogue sources

[Spanish drone system SME is looking for integrated navigation and control service partners to develop new solutions for Ummanned Aerial Vehicles](#)

Update: 2021-03-26 - Deadline: 2022-03-27

Spanish aerospace solutions SME with over 15 years of experience in the design of guidance, navigation and control solutions for Unmanned Aerial Vehicles (UAVs), already counting with links to Tier 1 aerospace manufacturers and Remotely Piloted Aircraft Systems (RPAS), is willing to establish partnerships relations and collaborations for new developments with entities working with high-performance unmanned planes, mini-UAVs and helicopters.

Oportunidades de cooperación empresarial: Demandas

[Architecture and design studio seeks partners under outsourcing agreements](#)

Update: 2021-03-31 - Deadline: 2022-04-01

Romanian architecture and design studio seeks partners specialized in architectural design, product design, 3D manufacturing, branding and leisure projects, in order to conclude outsourcing agreements.

[Romanian digital company seeks partners under outsourcing agreements](#)

Update: 2021-03-31 - Deadline: 2022-04-01

A Romanian digital company from Transylvania is looking for partners specialized in web development, design, digital marketing and copywriting, to develop projects within the framework of an outsourcing contract.

Oportunidades de cooperación empresarial: Ofertas

[A Catalan \(Spanish\) company specialised in plastic engineering offers product design and manufacturing service under an outsourcing agreement](#)

Update: 2021-03-31 - Deadline: 2022-04-01

A Catalan (Spanish) company, with long-term experience in technical plastic product's design and engineering, is looking for international business partners willing to assign them the

development and manufacturing of their products under outsourcing or subcontracting agreement.

[Immersive digital ship design software offered by Greek SME for commercial agency agreements](#)

Update: 2021-03-29 - Deadline: 2022-03-30

Greek software company has developed virtual reality application for the shipping industry that allows users the possibility to create and test ship design in an immersive digital environment. This SME is looking for foreign partnerships with commercial agents.

[Japanese manufacturer of protective industrial gloves seeks distribution agreement in the EU](#)

Update: 2021-03-23 - Deadline: 2022-03-24

A Japanese company with many years of experience in the manufacture of personal protective equipment wants to introduce their industrial gloves to the EU market. The company produces natural rubber, chloroprene, and nitrile gloves. They want to engage in long-term collaborations with potential EU partners under a distribution services agreement.

[A Korean company, specialized in manufacturing air filter media for dust collection using PTFE \(polytetrafluoroethylene\) membrane, seeks global partners for manufacturing agreements](#)

Update: 2021-03-31 - Deadline: 2022-04-01

A Korean SME, founded in 2007, is the 3rd player in the world to develop PTFE Membrane (polytetrafluoroethylene). The air filter media for dust collection using the PTFE membrane has a porous structure with fine pores and has features of thermostability, cold resistance, chemical/combustion resistance. This product is applicable to various areas. The company is looking for a filter manufacturer that needs air filter media for their finished product under manufacturing agreement.

[A Korean company manufacturing enterprise/industrial smartphones and handheld computers seeks international partners under commercial agency/distribution service agreements](#)

Update: 2021-03-30 - Deadline: 2022-03-31

Founded in 2006, a Korean company has become one of the top 3 industrial mobile device companies and has established its own brand since 2013 to make and supply enterprise/industrial rugged smartphones. It has passed various tests, such as water/dustproof, low/high temperature, 2 meters drop test, which guarantee its durability in extreme environments. It can be supplied in customized form factors. The company is looking for cooperation under commercial agency/distribution service agreements.

[Russian developer of marine electronics seeks commercial agents](#)

Update: 2021-03-30 - Deadline: 2022-03-31

A Russian company from the Rostov region is specialized in marine instrument-making and training equipment, such as class navigation pads, fishing simulators, sonar simulators, navigational sounders, scientific sonar equipment etc. The company is looking for potential partners for cooperation in terms of a commercial agency agreement.

[Ukrainian manufacturer of acoustic booths \(soundproof capsules, skype rooms or telephone booths\) is looking for distributors and sales agents](#)

Update: 2021-03-30 - Deadline: 2022-03-31

The Ukrainian company produces high-quality acoustic cabins (soundproof capsules) and wants to expand its business abroad so is looking for distributors or sales agents under an agreement on a commercial agency and distribution services agreements. Consumers of these products may be communications companies, other commercial companies and non-profit organizations.

[Russian developer and provider of AI-powered messaging contact center seeks licensees](#)

Update: 2021-04-09 - Deadline: 2022-04-10

A Russian developer and provider of an AI-powered messaging contact center solution has developed a platform for managing knowledge and text communications that leverages the collaboration of humans and artificial intelligence (AI) technology. The company is looking for partners to conclude a license agreement.

[Danish manufacturer of anti-bacterial safety handrails and grips for the healthcare sector seeks distributors.](#)

Update: 2021-04-09 - Deadline: 2022-04-10

A Danish company manufacturing handrails and safety grips has developed an anti-bacterial range of products effective against COVID-19. Their products are used in hospitals, nursery homes, clinics and other places within the healthcare sector where safety and well-being go hand in hand with high hygiene standards. The company is looking for distributors working within the healthcare sector.

[Spanish company seeks distributors for its innovative 3D light sheet microscopy.](#)

Update: 2021-03-26 - Deadline: 2022-03-27

A Spanish company has developed a flat light beam fluorescence microscope (lightsheet) for viewing 3D images of biological samples. The solution allows observing the development of live three-dimensional organoids and organisms over a long time up to several days. The company is looking for distribution agreements.

[A Slovak software house specialized in complex mobile, backend and smart device development offers its services under outsourcing or subcontracting agreement](#)

Update: 2021-03-31 - Deadline: 2022-03-30

The Slovak software development company focuses on creating bespoke mobile, web, backend and smart apps for the financial and industrial sector in Europe. The company also offers audits and solutions improving the client's presence and overall image in the mobile world. It is looking for partners seeking long-term partnerships, requiring reliable and secure software solutions, while remaining flexible with their IT capacities under outsourcing or subcontracting agreement.

[A Slovak software and design house, specializing in the development of dedicated software solutions, offers its services through outsourcing or license agreement](#)

Update: 2021-04-07 - Deadline: 2022-04-08

The Slovak software and design house is specialized in IT technologies, mobile and web applications, chatbot development and virtual and augmented reality. The company seeks companies in need of software solutions under outsourcing or license agreements in the EU. The company is looking for partners from start-ups to big players, who are thinking about having created tailor-made IT products.

[A French SME specialized on disabled people's issues offers licence agreements for its digital tool giving accessibility information for disabled people about buildings and sites receiving public. Commercial/distribution partnerships could be of interest](#)

Update: 2021-04-07 - Deadline: 2022-04-08

The French SME based in the north of France has developed an innovative tool enabling territories to share and manage their accessibility information. This solution aims to build a more inclusive world where people with disabilities, elderly and people with momentaneous mobility issues can plan their coming and go wherever they want without fear of inaccessibility. The company is looking for partners interested in licence agreement. Commercial/distribution partnerships could also be considered.

[A tool for remote monitoring and management of machines, devices and their operators, developed by a Polish company, is offered for distribution](#)

Update: 2021-04-07 - Deadline: 2022-04-08

A Polish company that operates in the field of engineering and software development and specializes in the Industrial Internet of Things solutions, has developed a tool for remote monitoring and management of machines, devices and their operators. It allows one to locate a machine and measure its performance. Knowledge gained that way can be used to optimize the allocation of company resources, increase effectiveness, and decrease costs. The company is looking for distributors of the solution.

[Slovak company engaged in the production of metal structures and their parts offers its services within the framework of subcontracting or manufacturing agreement](#)

Update: 2021-04-07 - Deadline: 2022-04-08

The company from Slovakia that manufactures metal structures and their parts is looking for partners in the mining, engineering, oil, energy and other industries. Services include material cutting, chip and shape machining, locksmith and welding work and finishing. The required type of partnership is subcontracting or manufacturing agreement.

[Italian data intelligence company is looking for partners abroad to implement its touristic destination forecasting system under subcontracting](#)

Update: 2021-04-07 - Deadline: 2022-04-08

This Italian data-tech company is specialised in analysing touristic local data. It has developed an online platform able to track touristic performance in realtime concerning not only past/actual results but also forward bookings/reservations on a destination. The company is looking for partners abroad to find new users (usually touristic clusters) of its system under subcontracting.

[Distribution partner sought for Czech producer of paper napkins, towels, toilet paper and other daily-hygiene products](#)

Update: 2021-04-06 - Deadline: 2022-04-07

A Czech producer of paper hygiene products such as napkins, towels, toilet paper and other daily-hygienic products for both industrial and domestic use is looking for new partners based on a distribution services agreement.

[A Portuguese SME has developed a real estate software and is looking to expand its company internationally through licensing or commercial agency agreements](#)

Update: 2021-04-07 - Deadline: 2022-04-08

A Portuguese company has developed a user-friendly real estate software to make the buyers' experience tailored to their preferences and help them detect the best opportunities through a centralized one-stop platform. The SME is looking for partners to establish a licensing with the real estate sector or a commercial agency agreement.

[Slovenian manufacturer of smart Internet of Things \(IoT\) device for remote monitoring and advanced analysis of power grids and surge arresters is looking for partners under a distribution services agreement](#)

Update: 2021-03-26 - Deadline: 2022-03-27

A Slovenian company is specialized in manufacturing of products for maintenance, renewal and set up of electro-energy systems. They offer an innovative smart device for remote monitoring and advanced analysis of power grids. The company is interested in enlarging its sales and is looking for partners for long-term cooperation under a distribution services agreement.

[Slovenian developer of software solutions, which automatically predicts, detects, prevents and enables an investigation of all kind of fraud seeks partners under license agreements](#)

Update: 2021-03-25 - Deadline: 2022-03-26

A Slovenian company is specialized in development of fraud, risk and operational performance software solutions for different markets including insurance, banking, utilities, telecommunications and government. The company is interested in enlarging its sales and is looking for partners for a long-term cooperation under a license agreement.

[A Turkish company that developed and sells an online safe and proctoring exam system is looking for commercial agency agreements](#)

Update: 2021-04-09 - Deadline: 2022-04-10

The Turkish company was founded in 2011 with the goal of developing innovative software solutions. It is an innovative software company that develops systems to use in governmental and private educational institutions. One of its products is an online safe and proctoring exam system. The company would like to reach new buyers and markets with commercial agency agreements.

[Spanish advanced optical design services company working with virtual and augmented reality, camera optics, high-end or automotive lighting, offers license, outsourcing or subcontracting agreements](#)

Update: 2021-03-25 - Deadline: 2022-03-26

An SME based in Spain addresses the global market, helping both big and small brands take their optical systems to the next level. Some examples of application fields are automotive lighting, Virtual and Augmented Reality (VR/AR) and camera lenses in smart-phones. The SME

typically designs on demand and licenses the solutions when these are based on proprietary background technology. The company is now looking to establish license, outsourcing or subcontracting agreements.

[Italian company manufacturing luxury multimedia totems \(point of sale displays\) looks for distributors and agents](#)

Update: 2021-04-08 - Deadline: 2022-04-09

An Italian company specialized in the production of multimedia totems / point of sale displays (POS displays) designed and assembled with luxury materials (such as precious wood, stones, leather, etc.) seeks international distributors and agents. The products target high-end users such as luxury hotels, museums, architecture and/or engineering studios, advertising agencies, corporate showrooms and exhibitions.

[Swedish SME specialized in high precision automation solutions is looking for distributors and agents](#)

Update: 2021-04-12 - Deadline: 2022-04-13

The Swedish SME is a supplier of nanometer precision automation solutions for high precision microscopy, analysis equipment and production equipment. The SME provides a plug & play solution of high precision piezo stages as well as customized stages and customer specific solutions. The SME is looking for distributors and agents that have end customers in the life science and/or the semiconductor industry but also for manufacturers of equipment for those industries.

[A French manufacturer of agricultural central tire inflation system indicating the slippage rate is looking for distributors in the European Union](#)

Update: 2021-03-26 - Deadline: 2022-03-27

Thanks to an innovative process, a French company designed a central tire inflation system (CTIS) which fits wheeled agricultural machinery. The innovation consists in the slippage rate information that is communicated to the operator. The technology gives the possibility to inflate and deflate the machine's tires according to several parameters. The company seeks serious distributors willing to create a distribution partnership for this innovation.

[Danish IT vendor specialised in e-commerce designed for large and complex product assortments offers license agreements](#)

Update: 2021-03-24 - Deadline: 2022-03-25

A Danish company offering PIM systems (product information management) targeting companies with large numbers of products seeks resellers worldwide under license agreements. The competitive edge of the offered system is the user friendly interface, the special ability to handle extreme large and complex product data structures and to syndicate data across different channels in a client company's complete e-commerce set-up.

[Finnish companies with an interactive fairy tale smart wall are looking for partners for a subcontracting agreement](#)

Update: 2021-03-31 - Deadline: 2022-04-01

Two Finnish companies active in the digital creative industries have joined forces and created an interactive smart wall solution that enables children to experience fairy tales with classical music. The fairy tale wall is a cost-efficient solution and it can be implemented practically into any surface. The companies are looking for partners who would include the fairy tale wall into their creative projects, the partnership would be in the form of a subcontracting agreement.

[An innovative Israeli technology company that makes interactive passenger information systems is looking for partners under distribution services agreement](#)

Update: 2021-04-11 - Deadline: 2022-04-12

This Israeli company develops an interactive information technology platform for cities and transportation, based on a touch display providing the passenger with personalized travel information. It serves residents and tourists, by providing different services required in the urban space. It improves passenger travel experience, strengthens community connections and reduces the city's operational costs. The company is looking for partners in order to conclude distribution services agreements.

[Software and hardware solution and test services from a Chinese IT company open to partnership through commercial agency agreement](#)

Update: 2021-04-12 - Deadline: 2022-04-13

The Chinese company supplies systems and products in the areas of electronics, electromechanics, and software and hardware designs for business clients in telecommunications, medical technology, industry, defence and many other sectors. The company is offering software and hardware testing service to its clients in the Chinese market, and aims to expand its business horizon abroad through signing commercial agency agreement with new foreign partners.
